

U. S. PLANT PATENT APPLICATION OF

CORNELIS ARIE HOOGENDOORN

FOR: ALSTROEMERIA PLANT NAMED

'ZALSABEL'

HOOGENDOORN, Cornelis Arie

TITLE: ALSTROEMERIA PLANT NAMED 'ZALSABEL'

APPLICANT: CORNELIS ARIE HOOGENDOORN

BOTANICAL CLASSIFICATION/CULTIVAR DESIGNATION:

Alstroemeria hybrida cultivar Zalsabel

5

BACKGROUND OF THE INVENTION

The present Invention relates to a new and distinct cultivar of Alstroemeria plant, botanically known as *Alstroemeria hybrida*, commercially used as a cut flower Alstroemeria, and hereinafter referred to by the name 'Zalsabel'.

10

The new Alstroemeria is a product of a planned breeding program conducted by the Inventor in Hillegom and Rijnsburg, The Netherlands. The objective of the breeding program was to develop new cut flower Alstroemeria cultivars with desirable flower and plant qualities, attractive flower colors and excellent postproduction longevity.

15

The new Alstroemeria originated from a cross-pollination made by the Inventor in June, 1996 in Hillegom, The Netherlands, of a proprietary *Alstroemeria hybrida* selection identified as 95172-1, not patented, as the female, or seed, parent with a proprietary *Alstroemeria hybrida* selection identified as 95146-1PN, not patented, as the male, or pollen, parent. The new Alstroemeria was discovered and selected by the Inventor as a

20

HOOGENDOORN, Cornelis Arie

flowering plant within the progeny of the stated cross-pollination in a controlled environment in Rijnsburg, The Netherlands in April, 1997.

Asexual reproduction of the new cultivar by root divisions taken in a controlled environment in Hillegom, The Netherlands, since September, 5 1997, has shown that the unique features of this new Alstroemeria are stable and reproduced true to type in successive generations of asexual propagation.

SUMMARY OF THE INVENTION

Plants of the cultivar Zalsabel have not been observed under all 10 possible environmental conditions. The phenotype may vary somewhat with variations in environment such as temperature and light intensity without, however, any variance in genotype.

The following traits have been repeatedly observed and are determined to be the unique characteristics of 'Zalsabel'. These 15 characteristics in combination distinguish 'Zalsabel' as a new and distinct cultivar:

1. Erect and strong flowering stems.
2. Vigorous growth habit.
3. Intense purple-colored flowers.
4. Good postproduction longevity.

HOOGENDOORN, Cornelis Arie

Plants of the new Alstroemeria can be compared to plants of the female parent selection. In side-by-side comparisons conducted in Rijnsburg, The Netherlands, plants of the new Alstroemeria differed from plants of the female parent selection in the following characteristics:

5 1. Plants of the new Alstroemeria had shorter flowering stems than plants of the female parent selection.

 2. Flower color of plants of the new Alstroemeria was more intense purple than flower color of plants of the female parent selection.

10 Plants of the new Alstroemeria can be compared to plants of the male parent selection. In side-by-side comparisons conducted in Rijnsburg, The Netherlands, plants of the new Alstroemeria differed from plants of the male parent selection in the following characteristics:

15 1. Plants of the new Alstroemeria had longer flowering stems than plants of the male parent selection.

 2. Flower color of plants of the new Alstroemeria was more intense purple than flower color of plants of the male parent selection.

20 Plants of the new Alstroemeria can be compared to plants of the cultivar Stabec, disclosed in U.S. Plant Patent number 9,041. In side-by-side comparisons conducted in Rijsenhout, The Netherlands, plants of the

HOOGENDOORN, Cornelis Arie

new Alstroemeria differed from plants of the cultivar Stabec in the following characteristics:

1. Plants of the new Alstroemeria had longer flowering stems than plants of the cultivar Stabec.
- 5 2. Plants of the new Alstroemeria had smaller flowers than plants of the cultivar Stabec.
3. Plants of the new Alstroemeria had intense purple-colored flowers whereas plants of the cultivar Stabec had red and white bi-colored flowers.

10

BRIEF DESCRIPTION OF THE PHOTOGRAPH

15

The accompanying colored photograph illustrates the overall appearance of the new Alstroemeria, showing the colors as true as it is reasonably possible to obtain in colored reproductions of this type. Colors in the photograph may differ slightly from the color values cited in the detailed botanical description which accurately describe the colors of the new Alstroemeria. The photograph comprises a side perspective view of a typical flowering stem of 'Zalsabel'.

20

DETAILED BOTANICAL DESCRIPTION

The aforementioned photograph, following observations and measurements describe plants of the new Alstroemeria grown in Rijsenhout, The Netherlands in a glass-covered greenhouse in ground

HOOGENDOORN, Cornelis Arie

beds. During the production of the plants, day temperatures ranged from 15 to 25°C, night temperatures ranged from 10 to 15°C and light levels averaged 5,000 lux. Plants used for the photograph and description were about one year old. The photograph and the description were taken during August and September, 2002. Color references are made to the Royal Horticultural Society Colour Chart, 1995 Edition, except where general terms of ordinary dictionary significance are used.

5

BOTANICAL CLASSIFICATION:

Alstroemeria hybrida cultivar Zalsabel.

10

PARENTAGE:

Female parent: Proprietary *Alstroemeria hybrida* selection identified as 95172-1, not patented.

Male parent: Proprietary selection of *Alstroemeria hybrida* identified as 95146-1PN, not patented.

15

PROPAGATION:

Type: By root divisions.

Root description: Fibrous, fleshy, thick; white, close to 155D, in color.

Rooting habit: Freely branching.

20

Rhizomes:

Shape: Elongate; rounded.

HOOGENDOORN, Cornelis Arie

Length: About 10 to 30 cm.

Diameter: About 3 to 10 mm.

Texture: Smooth.

Color: Close to 155D.

5 PLANT DESCRIPTION:

Plant habit: Upright; freely branching, bushy appearance.

Vigorous growth habit.

Time from planting to harvest of cut flowers: About 80 to 90 days.

Number of flowering stems produced per year: About 184 to 220.

10 Plant height: About 125 to 175 cm.

Plant diameter (spread): About 30 to 35 cm.

Flowering stem description:

Aspect: Erect.

Length: About 150 cm.

15 Diameter: About 4.75 to 10 mm.

Internode length: About 2.5 to 6 cm.

Strength: Strong.

Texture: Slightly pubescent.

Color: Close to 144A to 144B.

20 Foliage description: Leaves asymmetrical; sessile.

Length: About 15 to 20 cm.

HOOGENDOORN, Cornelis Arie

Width: About 3 to 5 cm.

Shape: Lanceolate.

Apex: Acute.

Base: Attenuate.

5 Margin: Entire.

Texture, upper and lower surfaces: Smooth, glabrous.

Venation pattern: Parallel.

Color:

Developing and fully developed foliage, upper
10 surface: Close to 137A; glossy.

Developing and fully developed foliage, lower
surface: Close to 137C.

Venation: Upper surface, close to 137A; lower
surface, close to 137C.

15 FLOWER DESCRIPTION:

Flower type and habit: Single cup-shaped flowers arranged in compound umbels. Perianth segments separate. Freely and continuously flowering. Flowers not persistent.

Natural flowering season: Flowering continuous during the spring
20 in The Netherlands.

Fragrance: None detected.

HOOGENDOORN, Cornelis Arie

Flower longevity on the plant: About four weeks.

Flower longevity as a cut flower: About 12 to 16 days.

Flower buds (showing color):

Length: About 2.5 to 3 cm.

5 Diameter: About 1 to 2 cm.

Shape: Roughly ovoid.

Color: Purplish.

Umbel length: About 15 to 25 cm.

Umbel diameter: About 25 to 30 cm.

10 Number of flowers per umbel: About 7 to 11.

Flower length (height): About 6.5 to 7 cm.

Flower diameter: About 5 to 6 cm.

Flower depth: About 6 to 6.5 cm.

Perianth:

15 Arrangement: Six arranged in two whorls, each whorl with
two lateral and one median segments.

Size, inner perianth segments:

Length: Laterals, about 6 to 7 cm; median, 5 cm.

Width: Laterals, about 1 to 2 cm; median, 1.8 to 2
20 cm.

Size, outer perianth segments:

Length: Laterals, about 5 to 6 cm; median, about 6 to 7 cm.

Width: Laterals, about 3.5 to 4 cm; median, about 3 to 3.5 cm.

Shape, inner perianth, all segments: Oblanceolate.

Shape, outer perianth, all segments: Obovate.

Apex, inner perianth, all segments: Acute.

Apex, outer perianth, all segments: Bracket-shaped.

Base, inner and outer perianths, all segments: Attenuate.

Margin, inner and outer perianths, all segments: Entire; weakly undulate.

Texture, inner and outer perianths, all segments: Smooth, glabrous; velvety.

Color, inner perianth:

When opening and fully opened, upper surface:

Laterals: 77A to 77B; towards base, 155D; splotches in white area, 2A; spots and stripes, close to 187A.

Median: 77A to 77B; spots and stripes, close to 187A.

HOOGENDOORN, Cornelis Arie

When opening and fully opened, lower surface:
Laterals: 77A to 77B; towards base, 155D;
splotches in white area, 2A.
Median: 77A to 77B.

5 Color, outer perianth:
When opening and fully opened, upper surface:
Laterals: 77A to 78C with green tip.
Median: 77A to 78B with green tip.

When opening and fully opened, lower surface:
10 Laterals and median: 77A to 78B with green
tip and venation.

Peduncles:
Length: About 4 to 8 cm.
Diameter: About 3 to 4 mm.

15 Strength: Strong.
Angle: About 20 to 30° from vertical.
Texture: Smooth, glabrous.
Color: Close to 137A.

Pedicels:
20 Length: About 2 to 3 cm.
Diameter: About 2 to 3 mm.

HOOGENDOORN, Cornelis Arie

Strength: Strong.

Angle: About 20 to 30° from vertical.

Texture: Smooth, glabrous.

Color: Close to 137A.

5 Reproductive organs:

Stamens:

Quantity per flower: Six.

Anther shape: Elliptical.

Anther length: About 8 mm.

10 Anther diameter: About 3 mm.

Anther color: Close to 201A.

Pollen amount: Abundant.

Pollen color: Between 202A to 202B and 95A.

Pistils:

15 Quantity per flower: One.

Style length: About 4 to 5 cm.

Style color: Dark purple.

Ovary color: Close to 144A.

Fruit:

20 Shape: Globular.

Color: Brownish.

HOOGENDOORN, Cornelis Arie

DISEASE/PEST RESISTANCE:

Plants of the new Alstroemeria have not been observed to be
resistant to pathogens and pests common to Alstroemerias.

TEMPERATURE TOLERANCE:

5 Plants of the new Alstroemeria have been observed to tolerate
temperatures from -5 to 40°C.
